01 PROFILE

I connect application workflows with the infrastructure and identity behind them. The goal is practical: less repetitive work, clearer access boundaries and systems people can troubleshoot and recover.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Own client application delivery, infrastructure and direct on-call support from requirements through deployment and operation.

Build access-controlled SaaS and AI integrations spanning Slack, Google Workspace, Atlassian and internal tools; implement OAuth/OIDC, selected SAML/SCIM, AWS IAM and Entra ID workflows.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC and built tools for NOC and DevOps teams supporting web-hosting, server and colocation customers, with extensive Docker work and substantial hands-on AWS delivery.

Migrated workloads from Hyper-V and VMware ESXi to Docker and Kubernetes, codified infrastructure with Terraform and ran SOC 1/SOC 2 audits. Later held sole systems-engineering responsibility for about a year.

Systems / Software Engineer · Office Evolution | 2014-2015

Connected CRM, provisioning, onboarding and service operations through centralized applications across locations.

Worked with the CEO and CIO to turn cross-department handoffs into explicit workflows, linking business needs to their supporting systems.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered client networks, systems and endpoints in a managed-services environment, with direct business-owner and end-user support.

Used monitoring and built diagnostic tooling for recurring problems, with on-call coverage through investigation and recovery.

Infrastructure and Systems Focal · IBM | 2010-2012

Operated shared enterprise infrastructure and coordinated changes, incidents and escalations across application, infrastructure and vendor teams.

Automated audit and backup workflows and managed virtualization test labs and hosted desktop platforms.

03 SELECTED WORK

Technomancy platform | Connected IT operations · Own practice and client-operations product

Built a TypeScript/PostgreSQL operating layer connecting support, CRM, scheduling, billing and infrastructure telemetry, with tenant-aware shared services.

Release tooling records Git-derived image identity and checks container and public HTTP health; separate recovery tooling verifies a backup checksum and restores into disposable PostgreSQL.

ProofMark | Identity and workflow integration · Completed client engineering contribution

Designed a document-signing workflow connecting identity, routing, PDF fields, verification and audit history.

Joined UI, APIs and data with encryption, webhooks and embedded signing, keeping security-sensitive state and fallback paths explicit.

04 CAPABILITIES

SaaS / API integrations / TypeScript / PowerShell / Bash / Python · AWS IAM / Entra ID / OAuth / OIDC / selected SAML and SCIM · VMware ESXi / Hyper-V / Docker / Kubernetes / Terraform · Windows / Linux / DNS / VPN / endpoint protection / recovery
